DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed Apr. 14, 2004 have been fully considered but they are not persuasive.

In response to applicant's argument claims 1,7, 13 that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the motivation of using ultra wideband receiver and transmitter between mobile and access point (e.g. base station) also described in previous cited reference (English US 2003/0036374, see fig.10 and its description). Therefore the previous rejection still maintains.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2683

3. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior Art fig.1 of the present application in view of Finn et al. (6,351,652).

Regarding claims 1-13, Prior Art of present application fig.1, discloses a base station communication device including a carrier wave-based transmitter wherein carrier wave communications are carried out in a forward channel from said base station communication device to said mobile communication device (see fig.1, elements 105, 106) and a mobile communication device including a carrier wave-based receiver (see fig.1, elements 115, 116), except for base station including an ultra wideband receiver and mobile including an ultrawideband transmitter. However, Finn et al. disclose mobile communication system and method utilizing impulse radio comprising a base station communication device including an ultrawideband receiver (see fig.10, elements 1016, 1018 and its description); and a mobile communication device including an ultrawideband transmitter wherein ultrawide band communications are carried out in a reverse channel from said mobile device to said base station communication device (see fig.10, element 1030, 1032, and its description). Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use Finn's impulse radio technique in Prior Art fig.1 in order to utilize very low power transmission in telecommunication system.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2683

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
